

Empower the Future Energy Workforce!

Classroom-based Mentorship Opportunity!

WSU Tri-Cities is looking for industry mentors to work with students interested in addressing the challenges of climate change and sustainable energy.

What will you help students do?

As an industry mentor, you will work with students as they learn to research, formulate, and communicate equitable solutions around energy and climate. With your guidance, students can better understand complex issues, explore public policy, or even create new business ventures.

Why?

Climate change and sustainable energy are significant challenges for this generation. Working with industry mentors, WSU Tri-Cities looks to help students think critically about the problems around them and uncover hidden opportunities. With your participation, students will discover that the Tri-Cities already offers them the tools they need to make a difference in these challenges, and this program will help to expose them to opportunities at WSU Tri-Cities and through the region.

What will we be working on?

- Innovation in energy and climate
- Impacts of energy sources
- Industry analysis and market creation
- Develop messaging for community engagement
- Renewable energy manufacturing
- Just and equitable energy development
- Clean energy transition

How much time is involved?

This mentorship opportunity will consist of four to eight sessions, lasting 60-90 minutes each. Up to half of these sessions can be done over Zoom.
